1. **COURSE ID:** CIS 132  
   **TITLE:** Introduction to Databases  
   **Units:** 3.0 units  
   **Hours/Semester:** 48.0-54.0 Lecture hours; and 96.0-108.0 Homework hours  
   **Method of Grading:** Grade Option (Letter Grade or P/NP)  
   **Recommended Preparation:**  
   Eligibility for ENGL 838 or ENGL 848  
   Eligibility for ESL 400

2. **COURSE DESIGNATION:**  
   **Degree Credit**  
   **Transfer credit:** CSU; UC

3. **COURSE DESCRIPTIONS:**  
   **Catalog Description:**  
   This course covers database design and the use of database management systems. It includes an introduction to the relational model, relational algebra, and SQL. It also covers XML data including DTDs and XML Schema for validation, and an introduction to the query and transformation languages XPath, XQuery, and XSLT. The course includes relational design principles based on dependencies and normal forms. Additional database topics introduced are indexes, views, transactions, authorization, integrity constraints, triggers, on-line analytical processing (OLAP), and emerging NoSQL (Not only SQL) databases for cloud and desktop computing.

4. **STUDENT LEARNING OUTCOME(S) (SLO’S):**  
   Upon successful completion of this course, a student will meet the following outcomes:  
   1. Create and assure the quality of a suitable data model for a given application.  
   2. Use normalization to transform a relational schema into a set of normalized relations (3NF).  
   3. Use SQL for database creation, manipulation and control.  
   4. Employ data storage and indexing options and perform query optimization.  
   5. Perform basic database administration tasks.  
   6. Employ XML technologies to query, manipulate and transform data.  
   7. Develop NoSQL desktop and cloud database solutions.

5. **SPECIFIC INSTRUCTIONAL OBJECTIVES:**  
   Upon successful completion of this course, a student will be able to:  
   1. Create and assure the quality of a suitable data model for a given application.  
   2. Use normalization to transform a relational schema into a set of normalized relations (3NF).  
   3. Use SQL for database creation, manipulation and control.  
   4. Employ data storage and indexing options and perform query optimization.  
   5. Perform basic database administration tasks.  
   6. Employ XML technologies to query, manipulate and transform data.  
   7. Develop NoSQL desktop and cloud database solutions.

6. **COURSE CONTENT:**  
   **Lecture Content:**  
   **Topical Outline**  
   1. Introduction  
      A. History of Databases  
      B. Database Concepts  
      C. Relational Model and Theory  
      D. Introduction of SQL  
   2. SQL Basics  
      A. SQL Syntax  
      B. Database Creation  
      C. Table Management  
      D. MySQL Data Types  
      E. Indexing  
      F. SQL Operators
G. Queries
H. Transactions
I. Metadata

3. Database Design Fundamentals
   A. Database Concepts
   B. Entities, Attributes, and Relationships
   C. Design Methods
   D. Design Requirements
   E. Primary and Secondary Keys
   F. Normalization

4. Database Administration
   A. Defining and Using Views
   B. Security
   C. Indexes
   D. Integrity Constraints
   E. Triggers
   F. Introduction to OLAP

5. Databases and XML
   A. DTDs
   B. XML Schema
   C. XPath
   D. XQuery
   E. XSLT

6. Introduction to NoSQL Databases
   A. Overview of NoSQL Databases
   B. NoSQL vs Relational Databases
   C. NoSQL Database Queries
   D. Cloud Computing with NoSQL Databases

7. REPRESENTATIVE METHODS OF INSTRUCTION:
   Typical methods of instruction may include:
   A. Lecture
   B. Directed Study
   C. Activity
   D. Discussion
   E. Other (Specify): Lecture will be used to introduce new topics. Teacher will model problem-solving techniques. Class will solve a problem together, each person contributing a potential "next step". Students will participate in short in-class projects (in teacher-organized small groups) to ensure that students experiment with the new topics in realistic problem settings. Teacher will invite questions AND ANSWERS from students, generating discussion about areas of misunderstanding. Teacher will create and manage an internet conference for discussion of course topics. Students will work in small groups to solve assignments.

8. REPRESENTATIVE ASSIGNMENTS
   Representative assignments in this course may include, but are not limited to the following:
   **Writing Assignments:**
   Students will complete and submit exercises and assignments on a weekly or biweekly basis.

   Typical assignments would include:
   Designing a relational database employing the normalization process
   Querying a relational database Updating and deleting database records
   Writing and using stored procedures, functions and prepared statements
   Employing XML and DTDs to retrieve data and describe table structure
   Using XPath, XQuery and XSLT to extract and manipulate table and web-based data
   Non-relational, distributed database design and creation using NoSQL web-based databases

   **Reading Assignments:**
   Students will read assigned chapters in the textbook and supplemental handouts.

   **Other Outside Assignments:**
   Students will be required to watch videos and participate in weekly webinars.
9. REPRESENTATIVE METHODS OF EVALUATION
Representative methods of evaluation may include:
A. Class Participation
B. Class Work
C. Exams/Tests
D. Homework
E. Projects
F. Quizzes
G. Written examination
H. Bi-weekly quizzes (short answer-from textbook material) to provide feedback to students and teacher.
   Assessment of student contributions during class discussion and project time. Individual database design assignments. Midterm and Final exams (short answer from textbook material), general problem solving (similar to in-class work), short database design segments (similar to assignments). Assessment of group participation on course projects, including peer-assessment of participation and contribution to the group effort.

10. REPRESENTATIVE TEXT(S):
Possible textbooks include:
   B. Hotzke & Stachowitz. SQL Database for Beginners, 1st ed. Learn to Program, Inc., 2014
   C. Fehily. SQL (Database Programming), 1st ed. Questing Vole Press, 2014

   Origination Date: September 2016
   Curriculum Committee Approval Date: October 2016
   Effective Term: Fall 2017
   Course Originator: Melissa Green
