Science, Art, and Emotion—A Personal Journey

Friday, April 19, 2019 • 7:30 pm • College of San Mateo Theatre
Admission FREE, Reception following

32nd Presentation of Art & Science

There is an orthodoxy that science is detached from emotion, and that scientists search for facts dispassionately. There is also an idea floating around that artistic creation is an emotional endeavor and works of art reflect social or individual emotions. Moreover, there is a truism that science and art operate respectively in the objective and subjective domains. In this presentation, in the light of forty years of teaching science and approximately thirty years of practicing art, I will examine these ideas.

Currently, I am working on my Symvisio XIII and hoping to complete it in time for exhibition at this event.

We will end the evening by setting up telescopes in front of the theatre, courtesy of the San Mateo County Astronomical Society and CSM Astronomy department. With help from the experts, you will tour the universe and view the spectacular celestial beauties.
