Guests: Lindsey Bynum, Dean Drumheller, Lorrita Ford, Paul Johnson, Tom Maloney, Jonathan McMahon, Danni Redding-Lapuz, Thanh Pitetta, Annie Theodos, Ruth Turner, Sue Roseberry, Jane Wong, Helia Ying

The meeting was called to order at 2:20 p.m.

Safety Presentation
Handouts: FEMA - Family Communication Plans, Emergency Supply List

Tom Maloney, who is a consultant working with the District on emergency preparedness, presented a video titled Disaster Service Worker Role of California School Personnel, Vol. 2

California law, Section 3100, states that all persons employed by the state, county, and city will become disaster service workers for up to 72 hours in the event of a disaster. Anyone required to serve in this role will be able to fulfill their disaster worker duty if they have prepared and created plans with their family in advance.

In the event of a calamity, all county facilities including CSM property are designated as housing shelters for evacuees second to hotels.
Working with Student Behavior Issues

Handouts: Every Life Matters wallet insert

Makiko Ueda shared tips on how to detect if a student has suicidal distress by being alert to the verbal, behavioral and situational clues outlined in the wallet insert provided. Any student who exhibits concerning behaviors should be reported to Public Safety, division dean, Psychological Services office, or administration.

Disruptive student behavior should be addressed in private spaces in order to communicate effectively. Faculty and staff should clearly state what behaviors are not acceptable in the classroom or office. Use the word “please” when addressing behaviors. For students who have been removed from class, implementing a behavior contract before allowing reentry will help prevent future disruption.

Outcome of District Audit

Jennifer Hughes reported that according to Kathy Blackwood SMCCCD was 100% compliant with all finance and program regulations.

SS Retreat

The retreat will be held on Friday, December 12 at 12:30 p.m. in the Center for Student Life. Jennifer announced that SSC members can email student services administrators about ideas to explore in the retreat.

Next Meeting: Tuesday, February 3, 2015
2:15 p.m. – 4:15 p.m.
10-468
Family Communication Plan

Emergencies can happen at any time. Does your family know how to get in touch with each other if you are not all together?

Before an emergency happens, have a family discussion to determine who would be your out-of-state point of contact, and where you would meet away from your home — both in the neighborhood and within your town.

Important Information

Fill in this information and keep a copy in a safe place, such as your purse or briefcase, your car, your office, and your disaster kit. Be sure to look it over every year and keep it up to date.

BE A HERO!

http://www.ready.gov/klds
Family Communication Plan

Emergencies can happen at any time. Do you know how to get in touch with your family if you are not together?

Let them know you’re OK!
Pick the same person for each family member to contact. It might be easier to reach someone who’s out of town.

Text, don’t talk!
Unless you are in immediate danger, send a text. Texts often have an easier time getting through during emergencies, and you don’t want to tie up phone lines needed by emergency responders (like 911).

Know the Numbers!

| Home: __________________________ | Adult: __________________________ |
| Parent: ________________________ | Home: __________________________ |
| Cell: __________________________ | Cell: __________________________ |
| Work: __________________________ | Neighbor: ______________________ |
| Parent: ________________________ | Home: __________________________ |
| Cell: __________________________ | Cell: __________________________ |
| Work: __________________________ | Neighbor: ______________________ |
| My cell: ________________________ | Home: __________________________ |
| Sibling: ________________________ | Cell: __________________________ |
| Cell: __________________________ | Out of state friend/relative: |
| Sibling: ________________________ | Home: __________________________ |

Memorize your home and parents’ cell phone numbers!

Cut this out and keep it somewhere safe like your backpack, school notebook, or wallet. Or input these numbers into your cell phone if you have one.

http://www.ready.gov/kids
Know Where to Go... and How to Get There.

**Pick a Meeting Spot**
Where will you meet up with your family if you have to get out of your house quickly? Where will you meet if your neighborhood is being evacuated and you’re not at home?

**In your neighborhood:**
(such as neighbor’s house or big tree)

**Out of your neighborhood:**
(such as the library or house of worship)

**Draw a Map**
Put a △ to show your home. Put a ○ to show your school. Mark your out-of-neighborhood meeting spot with an X and label it.

**Know the Exits**
Do you know two ways out of every room in your house in case of a fire? Draw a floor plan of your bedroom in the space below and circle the two ways to get out. Hint: one may not be a door!

http://www.ready.gov/kids
Emergency Supply List

- Books, games, puzzles or other activities for children
- Paper and pencils
- Mess kits, paper cups, plates and plastic utensils, paper towels
- Personal hygiene items
- Matches in a water- and windproof container
- Fire extinguisher

Use scented, color-safe or bleaches with added cleansers.

If you live in a cold-weather climate,
- Cold-weather clothing.
- Complete change of clothing including a long-sleeved shirt, long pants and sturdy shoes.
- Consider additional clothing if you live in a sleeping bag or warm blanket for each person.
- Consider additional bedding.

If you live in a warm climate,
- Emergency reference material, such as a first aid book or information from www.ready.gov.
- Cash or traveler's checks and change.
- Important family documents such as copies of insurance policies.
- Pet food and extra water for your pet.
- Infant formula and diapers.
- Prescription medications and glasses.
- Medications to consider adding to an emergency supply kit.
other places they spend time. Prepare kids for a household emergency or

Food, at least a three-day supply of non-perishable food

Water, one gallon per person per day for at least three days,
Step 3: Seek for help for yourself and a person who may be suicidal.

✓ "Will you go with me to get help?"
✓ "Will you promise me not to kill yourself until we've found some help?"

Helping someone who may be suicidal

Step 1: Recognize suicide clues and warning signs

Direct Verbal Clues:
✓ "I wish I were dead."
✓ "I won't be around much longer."
✓ "My family would be better off without me."

Behavioral Clues:
✓ Previous suicide attempts
✓ Acquiring a gun or other means such as pills
✓ Acting recklessly or engaging in risky activities
✓ Increased alcohol or drug use
✓ Sudden changes in mood, anger, irritability or withdrawal

Situational Clues:
✓ Loss of any major relationship
✓ Death of family member or best friend
✓ Financial hardship
✓ Academic difficulty

Step 2: If you suspect someone may be at risk, don't hesitate to ask direct questions about suicide.
✓ "Are you thinking about suicide?"
✓ "How are you going to kill yourself?"
✓ "When are you going to commit suicide?"
Basic TB Facts

Tuberculosis (TB) is caused by a bacterium called *Mycobacterium tuberculosis*. The bacteria usually attack the lungs, but TB bacteria can attack any part of the body such as the kidney, spine, and brain. If not treated properly, TB disease can be fatal.

How TB Spreads

TB is spread through the air from one person to another. The TB bacteria are put into the air when a person with TB disease of the lungs or throat coughs, sneezes, speaks, or sings. People nearby may breathe in these bacteria and become infected.

TB is NOT spread by

- shaking someone’s hand
- sharing food or drink
- touching bed linens or toilet seats
- sharing toothbrushes
- kissing

Latent TB Infection and TB Disease

Not everyone infected with TB bacteria becomes sick. As a result, two TB-related conditions exist: latent TB infection and TB disease.

Latent TB Infection

TB bacteria can live in the body without making you sick. This is called latent TB infection. In most people who breathe in TB bacteria and become infected, the body is able to fight the bacteria to stop them from growing. People with latent TB infection do not feel sick and do not have any symptoms. People with latent TB infection are not infectious and cannot spread TB bacteria to others. However, if TB bacteria become active in the body and multiply, the person will go from having latent TB infection to being sick with TB disease.

TB Disease

TB bacteria become active if the immune system can’t stop them from growing. When TB bacteria are active (multiplying in your body), this is called TB disease. People with TB disease are sick. They may also be able to spread the bacteria to people they spend time with every day.

Many people who have latent TB infection never develop TB disease. Some people develop TB disease soon after becoming infected (within weeks) before their immune system can fight the TB bacteria. Other people may get sick years later when their immune system becomes weak for another reason.
For people whose immune systems are weak, especially those with HIV infection, the risk of developing TB disease is much higher than for people with normal immune systems. Learn more about the difference between LTBI and TB Disease (/tb/topic/basics/difference.htm).

TB Symptoms

Symptoms of TB disease include:

- a bad cough that lasts 3 weeks or longer
- pain in the chest
- coughing up blood or sputum
- weakness or fatigue
- weight loss
- no appetite
- chills
- fever
- sweating at night

TB Risk Factors

Once a person is infected with TB bacteria, the chance of developing TB disease is higher if the person:

- Has HIV infection;
- Has been recently infected with TB bacteria (in the last 2 years);
- Has other health problems, like diabetes, that make it hard for the body to fight bacteria;
- Abuses alcohol or uses illegal drugs; or
- Was not treated correctly for TB infection in the past

Testing for TB Infection

There are two kinds of tests that are used to detect TB bacteria in the body: the TB skin test (TST) and TB blood tests. These tests can be given by a health care provider or local health department. If you have a positive reaction to either of the tests, you will be given other tests to see if you have latent TB infection or TB disease.

Exposure to TB
If you think you have been exposed to someone with TB disease, contact your health care provider or local health department to see if you should be tested for TB infection. Be sure to tell the doctor or nurse when you spent time with the person who has TB disease.

Treatment for Latent TB Infection and TB Disease

Treatment for Latent TB Infection

If you have latent TB infection but not TB disease, your health care provider may want you to be treated to keep you from developing TB disease. Treatment of latent TB infection reduces the risk that TB infection will progress to TB disease. Treatment of latent TB infection is essential to controlling and eliminating TB in the United States. The decision about taking treatment for latent TB infection will be based on your chances of developing TB disease.

Treatment for TB Disease

TB disease can be treated by taking several drugs, usually for 6 to 9 months. It is very important to finish the medicine, and take the drugs exactly as prescribed. If you stop taking the drugs too soon, you can become sick again. If you do not take the drugs correctly, the germs that are still alive may become resistant to those drugs. TB that is resistant to drugs is harder and more expensive to treat.

Everyday Preventive Actions That Can Help Fight Germs, Like Flu

CDC recommends a three-step approach to fighting the flu.

CDC recommends a three-step approach to fighting influenza (flu). The first and most important step is to get a flu vaccination each year. But if you get the flu, there are prescription antiviral drugs that can treat your illness. Early treatment is especially important for the elderly, the very young, people with certain chronic health conditions, and pregnant women. Finally, everyday preventive actions may slow the spread of germs that cause respiratory (nose, throat, and lungs) illnesses, like flu. This flyer contains information about everyday preventive actions.

How does the flu spread?

Flu viruses are thought to spread mainly from person to person through droplets made when people with flu cough, sneeze, or talk. Flu viruses also may spread when people touch something with flu virus on it and then touch their mouth, eyes, or nose. Many other viruses spread these ways too.

People infected with flu may be able to infect others beginning 1 day before symptoms develop and up to 5-7 days after becoming sick. That means you may be able to spread the flu to someone else before you know you are sick as well as while you are sick. Young children, those who are severely ill, and those who have severely weakened immune systems may be able to infect others for longer than 5-7 days.

What are everyday preventive actions?

- Try to avoid close contact with sick people.
- If you or your child gets sick with flu-like illness, CDC recommends that you (or your child) stay home for at least 24 hours after the fever is gone except to get medical care or for other necessities. The fever should be gone without the use of a fever-reducing medicine.
- While sick, limit contact with others as much as possible to keep from infecting them.
- Cover your nose and mouth with a tissue when you cough or sneeze. Throw the tissue in the trash after you use it.
- Wash your hands often with soap and water. If soap and water are not available, use an alcohol-based hand rub.
- Avoid touching your eyes, nose and mouth. Germs spread this way.
- Clean and disinfect surfaces and objects that may be contaminated with germs like the flu.
- If an outbreak of flu or another illness occurs, follow public health advice. This may include information about how to increase distance between people and other measures.
What additional steps can I take at work to help stop the spread of germs that can cause respiratory illness, like flu?

- Find out about your employer’s plans if an outbreak of flu or another illness occurs and whether flu vaccinations are offered on-site.
- Routinely clean frequently touched objects and surfaces, including doorknobs, keyboards, and phones, to help remove germs.
- Make sure your workplace has an adequate supply of tissues, soap, paper towels, alcohol-based hand rubs, and disposable wipes.
- Train others on how to do your job so they can cover for you in case you or a family member gets sick and you have to stay home.
- If you begin to feel sick while at work, go home as soon as possible.

What additional preventive actions can I take to protect my child from germs that can cause respiratory illness, like flu?

- Find out about plans your child’s school, child care program, or college has if an outbreak of flu or another illness occurs and whether flu vaccinations are offered on-site.
- Make sure your child’s school, child care program, or college routinely cleans frequently touched objects and surfaces, and that they have a good supply of tissues, soap, paper towels, alcohol-based hand rubs, and disposable wipes on-site.
- Ask how sick students and staff are separated from others and who will care for them until they can go home.

Everyday preventive actions can help slow the spread of germs that can cause many different illnesses and may offer some protection against the flu.

For more information, visit www.cdc.gov, or call 1-800-CDC-INFO.
Covered California’s Health Insurance Marketplace

Covered California® is the state’s destination for quality, affordable health care. A part of the national health care law (also called the Affordable Care Act), Covered California is a program from the state of California where qualified legal residents of California and their families can compare quality health plans and choose the one that works best for their health needs and budgets.

Based on income and family size, many Californians will also qualify for financial assistance to help pay for premiums and other out-of-pocket costs, such as medications, routine tests and copays for doctor visits. Even those who do not qualify for assistance will find a range of quality, private health insurance plans to fit their budgets. And no one can be denied for having a pre-existing condition.

Visit CoveredCA.com to learn more about eligibility and enrollment opportunities.

Through Covered California, you may qualify for financial help to pay for health insurance based on your household size and 2015 adjusted gross income:

<table>
<thead>
<tr>
<th>Number of people in your household</th>
<th>if your 2015 household income is less than</th>
<th>if your 2015 household income is between</th>

You may be eligible for Medi-Cal

Covered California Makes Quality Health Insurance Affordable

Four Standard Benefit Levels

Covered California has affordable insurance options for Californians at all income levels and family sizes. The new marketplace offers quality health insurance plans with four levels of coverage: Bronze, Silver, Gold and Platinum. At each level, all insurance plans offer the same benefits, allowing consumers to determine which level is best for them based on their expected use of medical services.

Platinum plans have the highest monthly premium, but they also pay 90% of covered health expenses. Bronze plans have the lowest monthly premium but only pay 60% of covered health expenses.

All health insurance plans were selected by Covered California based on their quality, provider networks and affordability. They all cover essential health benefits such as doctor visits, hospital care, emergency care, care for pregnant women, infants and children, and prescription drugs.
How to Get Help
A Covered California Certified Educator, Student or Counselor or State or local Agency may call to answer your questions about eligibility, flexible assistance, or special plans for other issues. Covered California has an online tool at www.coveredca.com that can help people pay for and compare health insurance plans. This tool can also help people determine their eligibility for Medi-Cal or financial assistance, as well as the level and type of financial assistance.

Responsibilities and Penalties
Income Changes
Since income level helps determine eligibility for Medi-Cal or financial assistance, income changes during the year may affect eligibility or assistance. People are responsible for reporting income changes to Covered California within 30 days of the change.

Penalties for Not Having Insurance
Most people are now required by law to have health insurance or pay a penalty when taxes are filed.

Minimum Coverage
Minimum coverage plans are available to people who are under age 30. Some people over 30 may qualify for a minimum coverage plan if they lack affordable coverage or are experiencing other hardship. Minimum coverage helps pay for health services in case of a serious and expensive medical emergency; minimum coverage plans cover three doctor visits per year at no cost and free preventive benefits. Consumers will have to pay the full cost of most other services until they reach their annual out-of-pocket maximum.

Medi-Cal
For Californians with limited income, Medi-Cal is a public health insurance program that provides coverage at very low or no cost. California has expanded access to Medi-Cal, so more people will qualify. Eligibility for the new expanded Medi-Cal is based on income and family size. For more information about eligibility for Medi-Cal or to find doctors and other providers that participate in Medi-Cal, visit www.dhcs.ca.gov or your local county social services office.

Types of Financial Assistance and Who Qualifies
Federal Premium Assistance
Those who are not eligible for Medi-Cal but are eligible to buy health insurance through Covered California may qualify for federal assistance to help pay for their health insurance premiums. The amount of monthly premium assistance depends on the age, family size and income of those to be covered. Premium assistance means that the federal government will pay a portion of the premium each month.

Help with Out-of-Pocket Costs
Depending on income and family size, some Californians may be eligible for federal premium assistance AND help with out of pocket costs, such as medications, routine tests and copays for doctor visits. This is called the Enhanced Silver option.
